THIN FILMS FOR MICROELECTRONICS AND HIGH TEMPERATURE SUPERCONDUCTORS

Properties of surfaces and interfaces in VLSI materials

Chemical structure of ultrathin silicon oxide films and the oxide–silicon interface 1
T. Hattori (Tokyo, Japan)

SiO_2 prepared by remote plasma-enhanced chemical vapour deposition using $SiCl_4$ and O_2 at substrate temperatures of less than 200 °C 6
A. Ortiz, C. Falcony (Mexico, Mexico), M. Farias, L. Cota-Araiza and G. Soto (Ensenada, Mexico)

Characterization of low pressure chemically vapor deposited silicon nitride using experimental design 11
J. A. Gregory, D. J. Young, R. W. Mountain and C. L. Doherty, Jr. (Lexington, MA, U.S.A.)

Double-crystal X-ray topography characterization of an electrical-bias-induced stress variation in metal-oxide–semiconductor field effect transistors 18
D. I. Ma, S. B. Qadri, M. C. Peckerar and D. McCarthy (Washington, DC, U.S.A.)

Characterization of silicon on insulator substrates using reflection mode double-crystal X-ray topography 27
D. I. Ma, G. J. Campisi, S. B. Qadri and M. C. Peckerar (Washington, DC. U.S.A.)

Interaction of Mo/Ni and Mo/Co bilayer structures with silicon 34
R. S. Rastogi, V. D. Vankar and K. L. Chopra (New Delhi, India)

Heterostructures, superlattices, and exotic insulators

Periodicities associated with low-order AlAs/GaAs superlattices 40
J. Pellegrino (Gaithersburg, MD, U.S.A.), S. B. Qadri (Washington, DC, U.S.A.), W. Tseng and J. Comas (Gaithersburg, MD, U.S.A.)

Modeling and experimental studies on transport phenomena

On the modelling of transport phenomena in chemical vapour deposition and its use in reactor design and process optimization 47
C. R. Kleijn (Delft, The Netherlands)

Model predictions of feature-size-dependent step coverages by PVD aluminum: surface diffusion 54
T. S. Cale, T. H. Gandy, G. B. Raupp and M. Ramaswami (Tempe, AZ, U.S.A.)

Concentration transient analysis of antimony surface segregation during Si(001) molecular beam epitaxy 59
L. C. Markert, J. E. Greene (Urbana, IL, U.S.A.), W.-X. Ni, G. V. Hansson and J.-E. Sundgren (Linköping, Sweden)

Simultaneous deposition and fusion flow planarization of borophosphosilicate glass in a new chemical vapor deposition reactor 64
W. Kern and J. Hartman (San Diego, CA, U.S.A.)

Thin film interconnect processes 70
F. Malik (Rio Rancho, NM, U.S.A.)

Novel plasma removal of a titanium nitride film 76
C. J. Ebel and C. W. Pollard (Essex Junction, VT, U.S.A.)

Thin film sensors and microstructures

The growth of thin, epitaxial SnO_2 films for gas sensing applications 81
S. Semancik and R. E. Cavicchi (Gaithersburg, MD, U.S.A.)

Sensor activity in pulsed laser deposited and ion implanted tin oxide thin films 88
R. Lal, R. Grover, R. D. Vispute, R. Viswanathan, V. P. Godbole and S. B. Ogale (Pune, India)

Thin metal film characterization and chemical sensors: monitoring electronic conductivity, mass loading and mechanical properties with surface acoustic wave devices 94
A. J. Ricco and S. J. Martin (Albuquerque, NM, U.S.A.)

The effect of substrate temperature on the composition and growth of tantalum oxide thin films deposited by plasma-enhanced chemical vapour deposition 102
S. O. Kim, J. S. Byun and H. F. Kim (Seoul, Korea)

Cr–O–X film as a strain gauge 107
H. Yamadera and Y. Taga (Aichi, Japan)

Laser ablation: BN, AlN, high T_c superconductors

Excimer laser ablation of a $YBa_2Cu_3O_{7-\delta}$ target in a vacuum: characterization of the mass and energy of ejected material 111
D. B. Chrisey, J. S. Horwitz and R. E. Leuchtner (Washington, DC, U.S.A.)

Superconducting thin films

Comparisons of high temperature superconductor thin films on various substrates for microwave applications 116
K. H. Young, G. V. Negrete, M. M. Eddy, J. Z. Sun, T. W. James, McD. Robinson and E. J. Smith (Santa Barbara, CA, U.S.A.)

Fabrication of high-quality Y–Ba–Cu–O thin films by plasma-enhanced metal-organic chemical vapor deposition 122
J. Zhao and P. Norris (Somerset, NJ, U.S.A.)

Growth and properties of Bi–Sr–Ca–Cu–O superconducting films by MOCVD 125
K. Endo, Y. Moriyasu, S. Misawa, H. Yamasaki and S. Yoshida (Ibaraki, Japan)

$YBa_2Cu_3O_{7-\delta}$ thin films deposited by an ultrasonic nebulization and pyrolysis method 128
W. J. DeSisto, R. L. Henry, M. Osofsky (Washington, DC, U.S.A.) and J. V. Marzik (Watertown, MA, U.S.A.)

Study of the sputtering of one-, two- and three-component targets for the preparation of $YBa_2Cu_3O_7$ superconducting film 132
K. Hirata, K. Ishibashi and N. Hosokawa (Tokyo, Japan)

Magnetic flux relaxation in $YBa_2Cu_3O_{7-x}$ thin film: thermal or athermal 137
S. Vitta, M. A. Stan, J. D. Warner and S. A. Alterovitz (Cleveland, OH, U.S.A.)

Preparation of yttrium barium copper oxide superconducting films by metalorganic molecular beam epitaxy 143
K. Endo (Ibaraki, Japan), S. Saya (Saitama, Japan), S. Misawa and S. Yoshida (Ibaraki, Japan)

Chemical synthesis of spun-on thick films of oxide superconductors 146
J. McKittrick and R. Contreras (La Jolla, CA, U.S.A.)

Reactive ion etching of $Nb/AlO_x/Nb$ for Josephson technology 151
C.-K. Hu, N. Mazzeo, S. J. Wind, D. J. Pearson and M. B. Ketchen (Yorktown Heights, NY, U.S.A.)

A new electrochemical technique for deposition of chevrel-phase compound $M_yMo_6X_8$ thin films 156
A. Garg, P. Garg and J. C. Garg (Jaipur, India)

Degradation of $Y_1Ba_2Cu_3O_{7-x}$ thin epitaxial films in aqueous medium and control of degradation using polymer overlayers deposited by pulsed excimer laser 161
S. Kale, M. Swaminathan and S. B. Ogale (Pune, India)

High T_c thin film superconductors: preparation, patterning and characterization 165
J. Azoulay (Tel-Aviv, Israel)

Critical current densities in Y–Ba–Cu–O coatings prepared using internal and external feed plasma spray systems 169
D. Maheswar Reddy, G. Swaminathan, S. Rajendra Kumar, K. Venugopal, S. Ravichandran, M. V. T. Dhananjeyan and S. C. Mohan (Hyderabad, India)

Resistive transition and $J_c(B)$ curves in plasma sprayed coatings of YBaCuO superconducting material 175
G. Swaminathan, M. V. T. Dhanajeyan, K. A. Durgaprasad and R. Somasundaram (Hyderabad, India)

The structure and electrophysical properties of gas–thermal high temperature superconducting coatings 179
V. A. Makara, N. N. Dashevskij, S. L. Revo and M. P. Semen'ko (Kiev, U.S.S.R.)

DIAMOND AND RELATED MATERIALS

Electronic applications of diamond and related materials

Characterization of semiconducting diamond film and its application to electronic devices 183
K. Okano, T. Iwasaki, H. Kiyota, T. Kurosu and M. Iida (Kanagawa, Japan)

Diamond-like carbon as an electrical insulator of copper devices for chip cooling 188
E. Marotta, N. Bakhru (Hopewell Junction, NY, U.S.A.), A. Grill, V. Patel and B. Meyerson (Yorktown Heights, NY, U.S.A.)

Large area diamond selective nucleation based epitaxy 192
J. S. Ma, H. Yagyu, A. Hiraki (Osaka, Japan), H. Kawarada (Tokyo, Japan) and T. Yonehara (Kanagawa, Japan)

Synthesis, structure and applications of amorphous diamond 198
D. R. McKenzie, D. A. Muller, E. Kravtchinskaia, D. Segal, D. J. H. Cockayne (Sydney, N.S.W., Australia), G. Amaratunga and R. Silva (Cambridge, U.K.)

Smooth diamond film deposition by a.c. discharge plasma chemical vapor deposition 204
S. Y. Choi, C. J. Zhang and G. S. Lee (Baton Rouge, LA, U.S.A.)

TRIBOLOGICAL COATINGS/SURFACE MODIFICATION

Mechanical processes at the nanometer scale

The relationship between static and kinetic friction and atomic level "stick–slip" motion 208
J. B. Sokoloff (Boston, MA, U.S.A.)

Atomistic mechanisms of adhesion and compression of diamond surfaces 213
J. A. Harrison, D. W. Brenner, C. T. White and R. J. Colton (Washington, DC, U.S.A.)

Molecular dynamics simulations of the nanometer-scale mechanical properties of compressed Buckminsterfullerene 220
D. W. Brenner, J. A. Harrison, C. T. White and R. J. Colton (Washington, DC, U.S.A.)

OPTICAL COATINGS, FILM CHARACTERIZATION, MAGNETO-OPTICS, AND GUIDED WAVES

Thin optical films

Ion-assisted processing of optical coatings 224
B. G. Bovard (Tucson, AZ, U.S.A.)

The effect of ion bombardment on the microstructure and properties of molybdenum films 230
R. A. Hoffman, J. C. Lin (Alcoa Center, PA, U.S.A.) and J. P. Chambers (Saxonburg, PA, U.S.A.)

Structural and optical characterization of electrodeposited chalcopyrite $CuInS_xSe_{2-x}$ thin films 236
P. Garg, A. Garg and J. C. Garg (Jaipur, India)

Optical properties of IR materials 241
M. E. Thomas (Laurel, MD, U.S.A.)

Controlled index of refraction silicon oxynitride films characterized by variable angle spectroscopic ellipsometry 248
Y.-M. Xiong, P. G. Snyder, J. A. Woollam (Lincoln, NE, U.S.A.), G. A. Al-Jumaily, F. J. Gagliardi (Westford, MA, U.S.A.) and E. R. Krosche (Rio Rancho, NM, U.S.A.)

Oxygen plasma ashing effects on aluminum and titanium space protective coatings 254
R. Synowicki, R. D. Kubik, J. S. Hale, J. Peterkin, S. Nafis, J. A. Woolam (Lincoln, NE, U.S.A.) and S. Zaat (Cleveland, OH, U.S.A.)

Pulsed excimer laser processing of optical thin films 259
V. N. Koinkar and S. B. Ogale (Pune, India)

Magnetic, magneto-optic, guided wave and phase change recording materials and devices

Fabrication and *in situ* X-ray photoelectron spectroscopy of granular metal thin films 264
S. I. Shah, B. A. Doele (Wilmington, DE, U.S.A.), I. Weerasekera and K. M. Unruh (Newark, DE, U.S.A.)

Use of lithographically defined metal masks in selective chemical etching of patterns in thin films: microelectronic applications 269
J. Khan (Shrewsbury, MA, U.S.A.)

Instrumentation for in situ and post deposition diagnostics of thin films

Correlation of *in situ* ellipsometric and light scattering data of silicon-based materials with post-deposition diagnostics 275
C. Pickering (Malvern, U.K.)

In situ ellipsometric studies of optical and surface properties of GaAs(100) at elevated temperatures 283
H. D. Yao and P. G. Snyder (Lincoln, NE, U.S.A.)

Study of InGaAs-based modulation doped field effect transistor structures using variable-angle spectroscopic ellipsometry 288
S. A. Alterovitz, R. M. Sieg (Cleveland, OH, U.S.A.), H. D. Yao, P. G. Snyder, J. A. Woollam (Lincoln, NE, U.S.A.), J. Pamulapati, P. K. Bhattacharya (Ann Arbor, MI, U.S.A.) and P. A. Sekula-Moise (Bedford, MA, U.S.A.)

Two-channel spectroscopic polarization modulation ellipsometry: a new technique for the analysis of thin SiO_2 films 294
G. E. Jellison, Jr. (Oak Ridge, TN, U.S.A.)

Instrumentation considerations in multichannel ellipsometry for real-time spectroscopy 300
I. An, Y. Cong, N. V. Nguyen, B. S. Pudliner and R. W. Collins (University Park, PA, U.S.A.)

X-ray fiducial foils 306
C. Alford, F. Serduke, D. Mkowiecki, A. Jankowski and M. Wall (Livermore, CA, U.S.A.)

Reststrahlen bands as property indicators for materials in dielectric coatings 312
C. G. Ribbing and E. Wäckelgård (Uppsala, Sweden)

METHODS FOR CHARACTERIZING FILMS AND MODIFIED SURFACES

Surface and thin film analysis techniques

Structural characterization of co-sputtered W–C–Fe films 318
B. Trindade and M. T. Vieira (Coimbra, Portugal)

Interface analysis for problem solving in industry and research 323
R. Hauert (Dübendorf, Switzerland)

Auger electron spectroscopy depth profiling of metal/oxide multilayer structures 327
A. Zalar (Ljubljana, Yugoslavia), S. Hofmann (Stuttgart, F.R.G.) and P. Panjan (Ljublijana, Yugoslavia)

Analysis of a-C:H superhard coatings by scanning Auger microscope and target factor analysis 330
R. Hauert, J. Patscheider, R. Zehringer (Dübendorf, Switzerland) and M. Tobler (Olten, Switzerland)

PAC and XPS studies of II–VI compounds 335
M. L. Swanson, W. C. Hughes, J. C. Austin and S. S. Choi (Chapel Hill, NC, U.S.A.)

Thermal desorption spectroscopy of palladium and copper on silica 340
D. E. Pierce, R. P. Burns (Chicago, IL, U.S.A.) and K. A. Gabriel (Watertown, MA, U.S.A.)

A study of passive films on valve metals 345
F. Malik (Rio Rancho, NM, U.S.A.)

X-ray photoelectron spectroscopic studies on yttria-stabilized zirconia and its surface transformation 349
D. Majumbar and D. Chatterjee (Rochester, NY, U.S.A.)

Microstructural characterization techniques

Characterization of the structural, electronic and tribological properties of metal dichalcogenides by scanning probe microscopies 355
C. M. Lieber and Y. Kim (Cambridge, MA, U.S.A.)

X-ray characterization of the microstructure in a CdTe epitaxial layer 360
D. Gao, A. W. Stevenson, S. W. Wilkins and G. N. Pain (Clayton, Vic., Australia)

Characterization of Mo/B_4C multilayers 365
A. F. Jankowski and P. L. Perry (Livermore, CA, U.S.A.)

Electron channeling pattern determination of crystallinity and crystallographic orientation in $YBa_2Cu_3O_{7-\delta}$ thin films 369
K. H. Young, T. W. James, McD. Robinson, A. H. Cardona (Santa Barbara, CA, U.S.A.), H. Suzuki, H. Kurosawa (Kumagaya, Japan), T. Yamashita (Niigata, Japan) and T. Hirai (Miyagi, Japan)

Nondestructive characterization techniques

Real time spectroscopic ellipsometry for characterization of thin film optical properties and microstructural evolution 374
R. W. Collins, I. An, H. V. Nguyen and T. Gu (University Park, PA, U.S.A.)

A new method to obtain reproducible measurements on single-wavelength, single-angle-of-incidence, null-seeking, polarizer–compensator–sample–analyzer ellipsometers 381
J. C. Panner, E. W. Conrad and J. L. Rogers (Essex Junction, VT, U.S.A.)

Parametric optimization of waveguide Raman spectroscopy in the near-IR 388
C. G. Zimba (Cambridge, MA, U.S.A.) and J. F. Rabolt (San Jose, CA, U.S.A.)

Author Index 395
